Other pages 2:

Let's add a chatbot page for auditor to chat through evidence and gap and for the regulations, the gap questions create for claire we can also ask here with the hard coded answers, something like the below screenshot

Evidence ingestion

- Part to upload/ batch upload,
- Then break it down to 3 filters (need review, flag by sustentra ai (fail), pass)
- Note to jack: since you build this out and know the user journey, you may have some more input that I miss, the key would be human in the loop, separate the ai and human action, and cleanly display the data and map it to regulation requirement

This is how Vanta is categorizing their evidence I think we could consider how they organize the evidence and once they click into it, they will be able to see the original document and check for themselves, the second screenshot is showing how our ai will be able to flag some gap, and they will be able to see that for the valuation, but the main ui once auditor click into the document should look like this: <https://sustentra-us.manus.space/extraction-review>

Gap analysis

Gap Clearance Workspace — ESG Assurance UI Spec

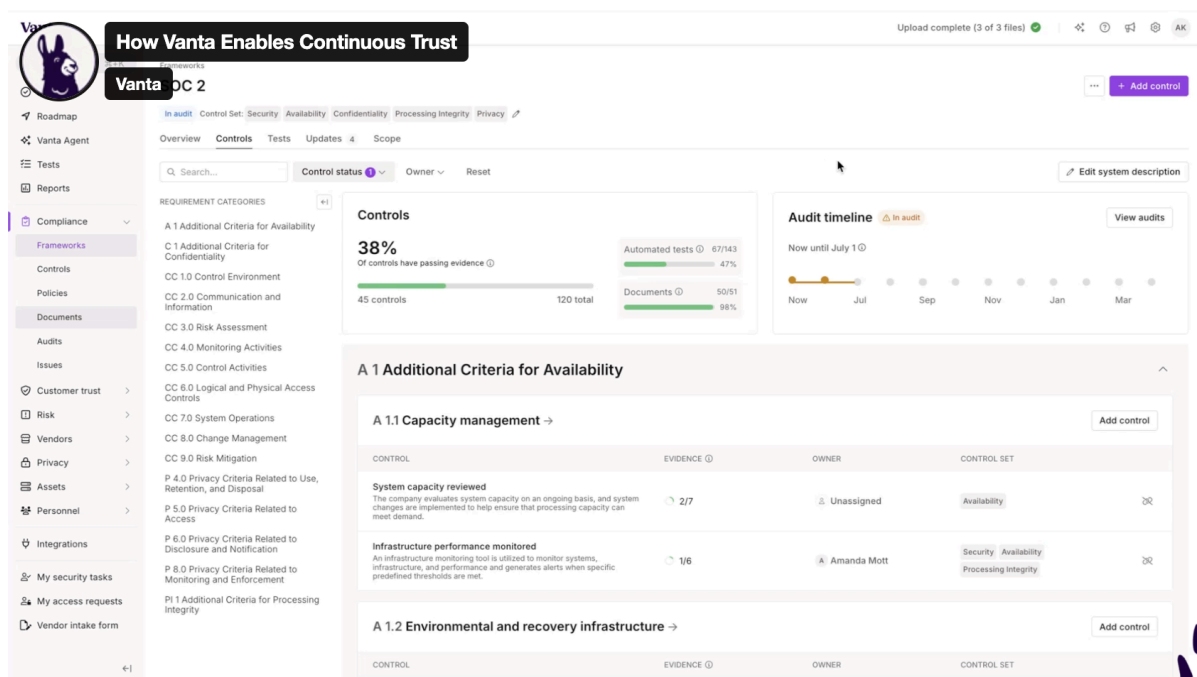

Purpose

The Gap Clearance Workspace helps ESG auditors manage issues found during a limited assurance engagement, resolve them with management, and prepare the final pre-reporting documentation before issuing the assurance conclusion.

Home page of gap analysis

The below is how vanta do it, equivalent of the “requirement categories” are the auditor checklist here:

<https://docs.google.com/document/d/1spsP4KmiVJh8JPEvuk5TzFWfBHOICI7OFmw1QX9fVXQ/edit?tab=t.0>

1. Gap Register

What it means for ESG auditors

A central list of all gaps, exceptions, missing evidence, calculation issues, boundary issues, and disclosure problems identified during the assurance process.

Auditor job-to-be-done

“I need one place to see every open issue, who owns it, what evidence is missing, whether it is resolved, and whether it affects the assurance conclusion.”

Inputs

- Gap title
- Finding category: data gap, evidence gap, calculation issue, methodology issue, boundary issue, disclosure issue
- Related metric: Scope 1, Scope 2, Scope 3, energy, waste, water, etc.
- Related disclosure / reporting requirement
- Description of issue
- Severity / risk level
- Owner
- Due date
- Evidence requested
- Evidence received
- Auditor notes
- Status: open, client responded, under review, closed, unresolved
- Potential report impact: none, possible, likely

Outputs

- Searchable findings table
- Individual finding detail page
- Status dashboard
- Evidence request draft
- Link to remediation plan
- Link to report impact assessment

UI should include

- Table view with filters
 - Kanban/status view
 - Finding detail drawer
 - Evidence attachment panel
 - Comment thread
 - Owner and due date tracking
 - AI-drafted evidence request button
-

2. Remediation Plans

What it means for ESG auditors

A structured action plan for how management should fix or explain each finding.

Auditor job-to-be-done

“I need the client to understand exactly what to correct, what evidence to provide, and what I will retest.”

Inputs

- Linked finding ID
- Required corrective action
- Evidence needed
- Management owner
- Target date
- Expected revised data / disclosure
- Auditor retest steps
- Acceptance criteria
- Management response

Outputs

- Client-facing remediation plan
- Internal auditor retest checklist
- Updated finding status
- Closure recommendation: close, keep open, escalate

UI should include

- “Create remediation plan” from finding
- Action checklist
- Required evidence checklist
- Management response box
- Retest procedure section
- “Mark ready for auditor review” button
- “Close finding” or “Escalate” decision button

3. Closed / Open Finding Summary

What it means for ESG auditors

A roll-up summary showing how many findings were identified, how many were resolved, and what remains open before the assurance report is issued.

Auditor job-to-be-done

“I need to know whether the engagement is clean enough to move toward reporting, or whether unresolved items still need attention.”

Inputs

- All finding statuses
- Severity of each finding
- Related metrics / disclosures
- Closure dates
- Remaining unresolved items
- Management responses
- Auditor closure conclusions

Outputs

- Summary dashboard
- Closed findings list
- Open findings list
- Aging report
- High-risk unresolved findings list
- Exportable closeout summary

UI should include

- Counts by status
- Counts by severity
- Counts by disclosure area
- Open vs. closed chart
- Overdue findings view
- “Ready for report review?” indicator
- Export summary button

4. Report Impact Memo

What it means for ESG auditors

A pre-reporting memo that summarizes whether unresolved findings may affect the limited assurance conclusion.

Auditor job-to-be-done

“I need to document whether the remaining gaps are immaterial, material, or create a scope limitation before we issue the assurance report.”

Inputs

- Unresolved findings
- Severity / materiality assessment
- Affected GHG metrics or disclosures
- Management explanation
- Evidence limitations
- Auditor evaluation
- Whether issue is isolated or pervasive
- Engagement partner review notes

Outputs

- Draft report impact memo
- Suggested conclusion impact: no impact, needs review, possible qualification, possible disclaimer / scope limitation
- List of unresolved items requiring sign-off
- Partner review package

UI should include

- Auto-generated memo draft
- “Unresolved findings included” section
- Materiality assessment section
- Report impact selector
- Reviewer comments
- Partner approval status
- Export to workpaper button

Important product rule

The product should not automatically decide the assurance conclusion. It should draft decision support and require auditor judgment.

5. Rep Letter Support

What it means for ESG auditors

Support for preparing the management representation letter inputs based on the final state of the engagement.

Auditor job-to-be-done

“I need management to formally confirm that they provided complete information, corrected known issues, and disclosed unresolved matters before we sign the report.”

Inputs

- Final GHG statement version
- Closed findings
- Unresolved findings
- Management responses
- Corrections made
- Evidence provided
- Known limitations
- Reporting boundary confirmations
- Methodology confirmations

Outputs

- Draft representation letter bullets
- List of management confirmations needed
- Unresolved matters to disclose in rep letter
- Final sign-off checklist

UI should include

- Rep letter support tab
 - Auto-generated representation points
 - Checkboxes for required confirmations
 - Management sign-off owner
 - Final version tracking
 - Export to Word / PDF
 - “Ready for report issuance” gate
-

Recommended Workspace Navigation

Main tabs:

1. Findings Register
 2. Remediation Plans
 3. Evidence Requests
 4. Closed / Open Summary
 5. Report Impact Memo
 6. Rep Letter Support
-

Core Status Flow

Finding created

- evidence requested
 - management responds (we dont care for now)
 - remediation plan created
 - auditor retests
 - finding closed or unresolved
 - summary updated
 - report impact memo drafted
 - rep letter support prepared
 - ready for assurance report review
-
